Assign Git User name and Password in PC

User name

```
C:\Users\User>git config --global user.name  
touseefahmedabbasi  
  
C:\Users\User>git confif -- global --unset-all user.name  
git: 'confif' is not a git command. See 'git --help'.  
  
The most similar command is  
    config  
  
C:\Users\User>git config --global --unset-all user.name  
  
C:\Users\User>git config --global user.name  
  
C:\Users\User>git config --global --unset-all user.email  
  
C:\Users\User>git config --global user.name Timtaimoor  
  
C:\Users\User>git config --global user.name  
Timtaimoor  
  
C:\Users\User>
```

User email

```
C:\Users\User>git config --global user.email  
  
C:\Users\User>git config --global user.email timtaimoor19@gmail.com  
  
C:\Users\User>git config --global user.email  
timtaimoor19@gmail.com  
  
C:\Users\User>
```

Note:

I have tried accessing your system using your name, but Microsoft Teams is still loading. Could you please suggest an alternative option for opening Microsoft Teams? Today, I have completed several tasks as mentioned above, including some practical exercises that I have already shared with you. After 3 o'clock, I plan to start practicing C# programming and then work on IA (I assume this stands for Information Architecture). I aim to have 80 to 90% of the work completed by 10 o'clock.
